Greenhouse Gas Information System (GHGIS)

Kick off and Open House

May 17, 2010

1:00 PM

Physics Auditorium

The GHGIS collaborative comprises a broad group of experts from Los Alamos together with Sandia, Livermore, PNL, Oak Ridge, LBL and NASA's Jet Propulsion Lab. This group brings together leading expertise in global climate science, terrestrial, atmospheric, and space-based monitoring, and impacts analysis on complex systems, from multiple Laboratory organizations. A GHGIS scoping study, funded by the DOE Office of Science, will establish what research and capabilities are needed to support negotiation and monitoring treaties on GHG emissions. Terry Wallace will introduce the kick-off with an overview of the challenges and the work the collaborative has done to date and on the path forward.

There will be an opportunity for questions and discussion as well as registration for people interested in participating in the scoping study.
